

Dear Ladies and Gentlemen,

In order to avoid questions and mistakes connected with ordering belts cut from sleeves, we decided to prepare the following instruction. It is dedicated for those who order ribbed belts (products starting with "PJ", "PK" and "PM" from brands OPTIBELT, CONTITECH and HUTCHINSON) or timing belts (products starting with "OMEGA" from OPTIBELT and "HTD" from CONTITECH).

Some of these belts are available from stock at Komorniki Hub (KOM) in the form of so-called "sleeves". They are cut at KOM with the special device and it allows to order any width of the belt needed by the customer. The width of the belt is defined by the quantity of ribs (ribbed belts) and by the width in mm (timing belts).

To proceed an order please follow these instructions:

1. Choose a product from your system
2. Place an order for the needed total quantity of the product (for ribbed belts: 1pcs = 1rib; for timing belts: 1pcs = 1mm width)
3. Send an email to magakom@ilslogistics.eu with the order number from Navision and the information how the belts should be cut

Example:

1. I would like to order 3 belts "PJ 1854 /CONTI/" with 5 ribs each
2. Place an order for 15pcs of "PJ 1854 /CONTI/"
3. Write to magakom@ilslogistics.eu that I need 3 belts with 5 ribs each and give the order number
