

Forming Gas Kit for leak detection

The air conditioning system is an indispensable element for modern cars and an essential comfort for drivers, also as far as safety is concerned. Keeping it efficient is therefore of the utmost importance: a refrigerant gas recharge is usually all it takes to make customers happy. However, in some cases, the vehicle may arrive at the workshop with the system completely empty, a clear sign of a leak. TEXA's Forming Gas Kit for leak detection allows quickly solving any problem in A/C systems that use refrigerants R134a, R1234yf or R744 (CO₂).

Using Forming Gas is a smart and true solution, since its chemical composition (95% nitrogen and 5% hydrogen) allows detecting even the smallest leaks with extreme precision, thanks to its molecular size, much smaller than any refrigerant gas.

TEXA

What the KIT includes (code S0755N)

- 1 - **PRESSURE REGULATOR**
- 2 - **TANK ADAPTER (1 L)**
- 3 - **NITROGEN/HYDROGEN CARTRIDGE (1 L)***
- 4 - **HP QUICK COUPLER FOR R134a**
- 5 - **HP QUICK COUPLER FOR R1234yf**
- 6 - **CONNECTION HOSE (1.5 m)**
- 7 - **ELECTRONIC LEAK DETECTOR**
- 8 - **MANOMETER** to detect leaks under pressure

* product amount is enough to detect leaks in 2 systems

EXTRA items not included:

6 nitrogen/hydrogen cartridges (code 5400154)
