

MANN-FILTER

Product Information

No. 156
05.08.2020

MANN-FILTER replaces CP 49 001 by C 49 002, CP 50 001 by C 50 004/1 as well as CP 50 002 by C 50 005

In collaboration with the vehicle manufacturer the design of several CP elements has been revised by MANN-FILTER. With this change, the MANN-FILTER equals visual and performance wise the OE filter. In accordance with this change, also the sales designation has been changed:

Until now: CP 49 001

Successor: C 49 002

Until now: CP 50 001

Successor: C 50 004/1

Until now: CP 50 002

Successor: C 50 005

Thanks to the new design the filter is much more appropriate for mounting in narrow installation space and provides an effective handle and abrasion protection. The separated dirt stays safely stored in the inside of the element.

A further advantage is the extremely high separation efficiency combined with a very low pressure drop.
