GPS

G-SENSOR

Gravity sensor is made for detecting a collision or sudden braking. In such case, the camera will automatically protect the currently recorded file from being overwritten.

STAND-BY MODE

Parking mode

When the car's engine is off, the camera will move to the stand-by mode.

In the moment of a hit by any other vehicle, **Xblitz Black Bird 2.0 GPS** will automatically start to record.

Motion Detection

In stand-by mode camera constantly analyzes the changes in the picture. In the moment of detecting a motion, it will start to record.

Automatic start

Car camera starts itself automatically and records in the moment of turning on the ignition. When the engine is off, the camera shuts down. Camera needs to be constantly plugged into the car cigarette lighter socket.
