Xblitz GO^{SE}

Mini rejestrator samochodowy

mini camera FULL HD DVR

Car camera **Xblitz P100** will let you enjoy safe and peaceful drive. Essential when it comes to both holiday journeys and everyday life routes.

Why to use Xblitz GO SE car camera? :

A real evidence during the overlaps, car accidents, arguable situations

Quick and proficient fix of the accident causer

Lack of witnesses is no longer a problem

Versatility: tape recorder, video camera, photo camera

Possibility of recording different road violations

Possibility of recording unpredictable sitches

VIDEO 1920x1080p

BUILT-IN MICROPHONE

SONY IMX323 SENSOR

WDR FUNCTION

MOTION DETECTION

LOOP RECORDING

8x IR LED

Xblitz GO SE is a novelty on the market, characterized by enormously good video recordings, small size and perfect quality of the workmanship. All those aspects make this device out of competition within its price class! Highest quality materials - glazed lenses and elegant, aluminium details. The camera mixes two perfectly fulfilling each other areas - reliability and easy of use with advanced functions such as parking mode, **170° wide-angle lenses** and high resolution picture.

HIGH VIDEO RESOLUTION

FULL HD 1920x1080p , 30 fps.

Registered picture may be easily displayed even on the high diagonal TV sets.

HIGH PHOTO RESOLUCIÓN

Pictures may be shot with a resolution up to 12 Mpx, which provides various methods of its usage (to print, to analyze the sitch, to read-out the car plates etc.). Maximum image resolution is 4032x3024.

INTERNAL BATTERY

The internal battery is a small capacity part of the camera. It serves for the few minutes power supply when the car engine is off.

BUILT-IN MICROPHONE

Very sensitive, registers the sound inside of the car. This function may be turned off.

NIGHT MODE

The camera has the night vision mode to register the view when the light level is not enough to obtain satisfying picture.

SOLID CAR HOLDER

The camera contains stable and handy fastening system. Strong sucker provides certain and sustainable assembly of the device.

AUTOMATIC START OF RECORDING

The camera starts recording itself in the moment of ignition and stops recording itself when we turn off the car engine. The camera needs to be continuously connected to the car cigarette lighter power supply.

POWER WIRE INSIDE THE GRIP

The camera obtains incredibly handy fastening system. Strong sucker allows the certain and sustainable assembly inside the vehicle. Additionally, the grip has been equipped with mini USB slot that supplies the power to the device. Thanks to this solution, we may connect the charger with the grip permanently and the camera may be putted in/ putted out within few seconds of our time.

DIGITAL ZOOM

Quadruple digital zoom is another function of the camera. Should be set before the recording.

LONG RECORDING TIME

The size of the 3 minutes movie is around 300 MB (when the resolution is highest and the sound is on). 64 GB memory card is able to record with maximum quality for around 10 hours. Referring to this, when the loop recording is off, the user always has the last 10 hours of driving saved on the internal memory.

LOOP RECORDING

One of the main and most important characteristics of the dashcameras. This function let us set the length of single video (2/3/5 minutes). Turning this option off indicates continuous video registration (not recommended). Maximum length of the video is limited by its format files - utmost 2GB.

MATERIALS

High quality, sustainable and resistant plastic case.

G-SENSOR

G-sensor provides safety in case of the accident and prevent from overwriting the crucial record.

SOS FUNCTION

Automatic save of the currently recorded file to prevent the moment from being overwritten / deleted. This function can be turned on by pushing the right button.

FILE FORMAT MOV H.264

Advanced video coding system keep the high quality recordings together with the great file compression.

PARKING MODE

Within the moment of the bonk, the camera will turn on automatically and starts recording. After 15-30 seconds, the device will turn off automatically again.

MOTION DETECTION

The stand-by mode makes the camera analyze the view. If the picture dramatically changes due to the sudden move - the camera will start recording until the motion stops.

WIDE-ANGLE LENS

The camera obtains 170° angle lenses thanks to which we may record wider space in front of the vehicle. Glazed lenses provides perfect video quality.

BUILT-IN SPEAKER

Sonic signals alert when pushing the buttons, playing videos recorded with sound.

INSTRUKCJA MONTAŻU KAMERY

1. Wybierz i wyczyść miejsce montażu kamery
2. Zamontuj uchwyt kamery
