

Congratulations on your purchase of a top-quality product that meets the highest quality and safety requirements

Safety instructions

Before use, please carefully read the instructions provided in the carrier bag.

JAZZY2GO charging cables are only to be used for charging electric cars (EVs) at charging stations with the Mode 3 protocol according to ISO Standard 17409 and IEC Standard 61851. Our charging cables are TUV approved and have been rigorously tested both during and after the production process.

Before using, always check the charging cable. If it is damaged in any way, never use it for a charging session. Contact your supplier.

When charging, the charging cable must be fully unrolled. The charging cable must not contain any knots.

The charging cable may not be used with an extension cord or with a charging cable of a similar type.

The plugs must not come into contact with water or heat source.

After use, roll the cable up neatly and put the caps (included) onto the plugs. If necessary, clean the charging cable with the microfiber gloves provided. Avoid kinking of the cable.

Improper use of the charging cable can cause short circuits and serious injuries. Negligence can result in life-threatening shocks.
