### Cabin air filter with plastic insert and cover: new solution for various Mercedes-Benz models

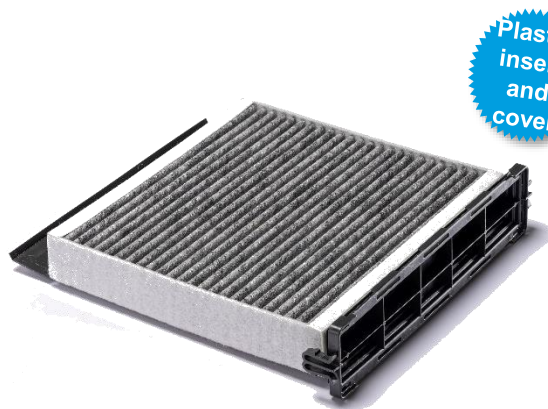

For current Mercedes-Benz models, MANN-FILTER offers cabin air filters, which deviate observably from the OE filters in their visual appearance.

#### What are the differences?

The black plastic insert and the subsequently less number of pleats are evident, just as the integrated cover (image 1).

The original filter has two holes on both sides (image 2). Pins inside both the housing and the original cover are received by the respective holes of the element. This combination is patented.

MANN-FILTER cabin air filter with plastic insert and cover has a higher quality filter medium and corresponds to 100% original equipment quality.

**Image 1:** The cabin air filters from MANN-FILTER have a black plastic insert and an integrated cover, so no pins do ingress.

The original cover (order no.: 247 830 85 00) is no longer needed.

**Image 2:** The OE filters have two holes on both sides and a separate cover. Two pins placed in the housing can ingress in the filter as well as the pins on the cover.
