

PRODUCT INFORMATION

DIFFERENTIAL PRESSURE SENSORS

In addition to lambda sensors and exhaust gas temperature sensors, differential pressure sensors are the third type of exhaust gas sensors available from Pierburg.

Differential pressure sensors are most commonly used to determine the degree of loading of the diesel particulate filter. It can also be used to detect whether e.g. an air filter or an EGR cooler is clogged or blocked. To do this, the sensor normally measures the pressure difference downstream and upstream of the component – and thus the loss of pressure that it causes. Sometimes (although rarely) the pressure difference to the ambient pressure is also measured.

Due to stricter exhaust gas regulations, differential pressure sensors are increasingly being fitted to petrol particulate filters in petrol vehicles, as well.

FOR ALMOST 90 MILLION VEHICLES

Differential pressure sensor on diesel particulate filter and on low-pressure EGR cooler

The item numbers that are currently available are compatible with a huge number of vehicles globally – almost 90 million – with the range continually being expanded.

You will find a list of the products currently available for delivery on the next page.

If the sensor is faulty, then it is not possible to determine the degree of loading of the particulate filter, for example. This can result in the filter not being able to regenerate and subsequently suffering irreversible damage. In the worst case, this can not only lead to loss of power and the costly replacement of the particulate filter, but also result in damage to other components in the exhaust tract.

DIFFERENTIAL PRESSURE SENSOR PRODUCT RANGE

Pierburg no. Component	Pierburg no. Module ¹⁾	OEM	Current OE no. ¹⁾	No. of vehicles worldwide [in millions]
7.11190.00.0		VAG	07Z 906 051 A	0.7

¹⁾ These item numbers are not available for order, but serve to link reference numbers from vehicle manufacturers if these comprise other components (e.g. hoses or brackets) in addition to the differential pressure sensor as a module ("available for delivery according to parts list").
At Motorservice, you can order the differential pressure sensor separately as an individual component of the module (column 1).

* The reference numbers given are for comparison purposes only and must not be used on invoices to the consumer.
All content including pictures and diagrams is subject to change. For assignment and replacement, refer to the current catalogues or systems based on TecAlliance.
