SKF design evolution: different design on SKF bearing compared to OEM

For VKBA 6510, SKF has chosen to develop and apply a different design for the independent aftermarket with an ABS encoder cover, that distinguishes it from the OEM part.

The advantage with this change of design is less friction and a better sealing performance. The fitting procedure is the same for both alternatives.

NOTE: Do **NOT** remove the cap, when mounting, as this cap guarantees the sealing performance.
